## EXPERIENCE

---

2020 - 2021: *Truelogic - (Biotechnology company)*

### Senior Front-end Developer

- In charge of solving issues, developing new features in two systems that control a robot that is used by embryologists, for artificial insemination. You could create tickets for freezing embryos, schedule freezes and thaws, manage all patients and do bulk imports
- Also in charge of implementing Husky in the repositories, a tool for improve alongside with ESLint the code cleanup and code linting of the project, preventing from garbage being left in the code and improving reliability
- Working with agile development - 14 days sprints, dailies and other weekly meetings

**Technologies employed:** Vue 3, Vuex, Tailwind, Unit tests (vue-jest), Integration/E2E Tests (Cypress), TypeScript, GIT, GitLab, Husky, Postman

2020 - 2021: *Software Development Company*

### Senior Front-end Developer

- In charge of developing a mobile application with React Native, which was a conversation app between doctor and patient (one app for the doctors and one for the patients). Before the conversation you can customize your health info and then create an alert for needing a doctor for appointment - the doctor then can see appointments available for him to start the conversation and solve the patient's problem
- Also in charge of developing the Earnings section of the doctor's app, which was a chart where with the doctor's earnings per appointment, and you could filter between weeks/months and also withdraw money from his earnings
- Working with agile development (Scrum)
- In charge of choosing strategies of development
- **Technologies employed:** React Native, Styled Components, Typescript, NodeJS, Context API, GraphQL, Azure, GIT, Insomnia REST

2020: *Financial Services Startup*

### Lead Front-end Developer

- Working with agile development (Kanban)
- In charge of developing a web application of personal loan. I used React for the front-end, Redux for state management and styled components for styling. It was a step by step register, informing your personal info, sending documents for loan approval
- **Technologies employed:** React, NodeJS, Redux, Styled Components, Webpack, BitBucket, GIT, Postman
